Here are the KiCad files.

Gmail is blocking the zip and 7z files so here is a link to box: <https://ucdavis.box.com/s/dmw1p19ogoi3mxlrhkh5l0jhlbf8tljj>

The first PCB is called eec134_radar_baseband.

The second set of PCBs (6 in total, one for each component) all start with radar_, i.e. radar_adl5606.

For the second set, since we were porting over the circuits from the first with few changes, we decided to forgo the schematics and netlists and just do everything in PCBnew.

If anything is missing, give a shout.

Andy
